## **Critical Defect Notice**

One Critical Defect per page

Time and date defect identified:		/
Premises name:		
Address:		
Description of critical defect:		
Corrective action required:		
Name of Owner/Occupier: (Please circle the correct option)		Print name
Contact details for Owner/Occupier: (Please circle the correct option)		Print address
Has the Owner/Occupier been verbally notified of defect? (Please circle the correct option)		Yes / No (Please circle the correct option)
If notified verbally, on what date was the communication?		/
On what date was written notification given?		
How was notification provided?		Fax / Email / Hand delivered / Post (Please circle the correct option)
Name of Contractor:		Print name
Contractor signature:		
Company:		
Accreditation/Licence number:		
Contractors defect identification number: (if applicable)		

The Owner/Occupier should be aware that failure to rectify the critical defect is in breach of Section 104D of the *Fire and Emergency Services Act 1990* and penalties apply.

The Building Fire Safety Regulation 2008 allows 1 month maximum after notification to rectify critical defects, this does not negate the obligation of the occupier to initiate where necessary interim measures for the safety of occupants.

# **Explanatory Notes**

#### for Critical Defect Notice

This document should be read when completing a *Critical Defect Notice* in line with requirements of the *Building Fire Safety Regulation 2008*. These *Explanatory Notes* provide instruction and examples as to what constitutes a *critical defect*. This document does not list all types of critical defects.

The definition of a *critical defect* provided in the *Building Fire Safety Regulation 2008* is "a *defect that* is likely to render the fire safety installation inoperable and the defect is reasonably likely to have a significant impact on the safety of occupants of part or all of the building if a fire or hazardous materials emergency happens".

For the purposes of these notes: 'inoperable' is defined in the dictionary as "Not able to perform its normal function".

For the purposes of these notes: 'significant' is defined in the dictionary as "Likely to have a major affect".

The Queensland Fire and Emergency Services would usually determine a critical defect as something that affects a fire safety installation sufficiently so as to prevent it from performing its normal function.

In order to be deemed 'critical', a defect would normally be seen to <u>significantly</u> affect the installation.

If a defect is only in part of the installation but constitutes a life risk, such as where people are sleeping or where people have special needs, the defect may be classified as a critical defect. In this case consideration should be given to employing interim measures to ensure the safety of the occupants.

#### **Example of a Critical Defect**

A zone of a fire alarm system, which is inoperable, in any class of building.

**Note**: In a building with sleeping accommodation the example above of a critical defect would require interim measures to be taken by the occupier, which may include:

- Installing 9volt battery operated smoke alarms in strategic locations to provide early warning in the event of fire.
- Employing security guards to patrol the building 24 hours a day.

The following are **not** considered critical defects but are defects and are also required to be repaired within one month:

- Fire extinguishers empty or undercharged, providing there are other extinguishers available.
- Some emergency lights or exit signs not working, but not the whole system.
- Installations temporarily shut down for repairs (if a contractor is in attendance and emergency measures are implemented).
- Exit door hardware not compliant (providing they are not locked).
- Superficial damage to a fire hose reel.
- Superficial damage to a fire hydrant.

### Where can I go for more information?

If you require further information, visit <a href="https://www.qfes.qld.gov.au/buildingsafety/">https://www.qfes.qld.gov.au/buildingsafety/</a> for a contact list of Regional Community Safety Offices, the Fire Safety Management Tool for Owner/Occupiers and the associated Advisory Notes.
